

CLEAN AIR COUNCIL

February 5, 2018

Dear Pennsylvania Public Utility Commissioners,

Clean Air Council (the Council) is a member-supported environmental education and advocacy organization serving Pennsylvania and Delaware. The Council has worked to protect and defending everyone's right to breathe clean air for over 50 years. The Council has 7,000 paying individual contributors and almost 30,000 advocates.

Clean Air Council submits the following comments on behalf of 549 of its members regarding docket # M-2017-2631527 on PUC's interpretation of Act 40. The 549 individuals in the attached spreadsheet signed the below comment:

Act 40 was a bipartisan effort designed to encourage more investment and job creation in Pennsylvania's solar industry, and to make the Commonwealth more attractive to businesses looking to power their operations with renewable energy.

PUC's current interpretation of Act 40 directly undermines the intent of the law, and would continue to prevent Pennsylvania from keeping and attracting solar jobs and investment.

I urge you to implement Act 40 as lawmakers intended by only allowing solar systems within Pennsylvania to qualify for and sell Solar Renewable Energy Credits into the Pennsylvania market under the Commonwealth's Alternative Energy Portfolio Standard.

Many of these same members also submitted their own additional individual comments while signing onto the above comment (see column G of the attached spreadsheet). Thank you for your consideration of these comments.

Sincerely,
Joseph Otis Minott, Esq.
Executive Director and Chief Counsel
Clean Air Council
135 S 19th St #300, Philadelphia, PA 19103
215-567-4004, joe_minott@cleanair.org

Supporting solar and other alternatives is the right thing to do for our Commonwealth, our Nation. If you don't, you're cheating our citizens and their descendants of good health and a healthy environment. Please don't support fossil fuel greed, support your fellow citizens and the land that sustains us.

Please implement Act 40 as it was originally intended to promote solar industry growth in Pennsylvania. I urge you to implement Act 40 as lawmakers intended by only allowing solar systems within Pennsylvania to qualify for and sell Solar Renewable Energy Credits into the Pennsylvania market under the Commonwealth's Alternative Energy Portfolio Standard.

Please, do the right thing. Our health depends on it.

We need to be free from relying on oil and gas which produce greenhouse gasses, as well as nuclear power that produces waste that takes eons to be safe. Solar power is the future alone with other renewable methods and we should be leading the charge. We should not keep on kowtowing to the polluting extraction industry for our energy.

please do the right thing!

Let's give Pennsylvanians the advantage in investing and creating jobs in the solar industry that they deserve. Why would we allow other out-of-state companies to have those privileges if we are trying to build up our state and create our own sustainable revenue? It will be a great advantage in the long run!

We need solar and wind. The energy of the future.

my wife and i are scientists who are very concerned about the risks of climate change on our grand children.

Strive to make the world a more beautiful place than you have known it in your lifetime. Always consider the the future. Future generations that will inherit this world after we are long are at the mercy of today's decisions. Think beyond yourself and the immediate moment. Remember, you can't take money with you when you are gone.

WE WANT CLEAN ENERGY! GIVE US SOLAR!!

Solar energy is crucial to the future of the planet This is outrageous. Work for PA.

This is removing jobs and development in PA. And taking steps backward from moving toward cleaner air and water. Please close the borders for renewables! The federal tariff is projected to remove 24% of solar from PA. We can't afford to loose more.

Jay Tarler 19144

I have solar panels and solar thermal on the barn at my farm in Jefferson County, supporting the energy needs of a goat dairy and creamery. Part of how I did that was with a subsidy from PA's Project Sunshine, a program that former Governor Corbett and the Republican legislators killed. Act 40 is the least we can do if we are not going to actively support solar energy in PA.
